

Product description

Unicorn series of multi-loop power meters are designed for multi-loop power measurement requirements, with single-phase 12-loop or three-phase 4-loop input, can be applied to diversify the use of a variety of different power circuit applications, significantly reducing costs. At the same time with standard RS485 Modbus communication, demand, data recording and other functions, with internal 2MB Flash memory capacity, use more diversified. The body adopts DIN Rail rail design, making it easy to install, use elastic and so on.

Application

- Electric billing management for rental buildings/apartments
- Marketing food stalls and mobile homes billing management
- School dormitory/exhibition booth electricity billing management
- Store rental booth electricity management
